TRY TO TALLY LOAD CURRENTS

The circuit schematic shows a +12V power input regulator using the TPS26600RHFT. The input is connected to a +12V IN source, which is also connected to a 1A Power Supply (N201). The input is protected by a 24V DNP diode (D201) and a 10k resistor (R204). The input is connected to the IN pin of the TPS26600RHFT. The output of the regulator is +12V, which is connected to a 100uF capacitor (C203) and a 10k resistor (R211). The output is also connected to a PWR_FLAG signal. The regulator is configured with UVLO, OVP, and dVdT MODE. The output is +12V, with a note indicating +3.58V output at +13.2Vin and +3.21V output at +12.0Vin. The schematic also shows a PWR_FLAG signal and a Telemetry signal.

UVLO threshold set to 10.8V
OVLO threshold set to 13.2V
MODE set to Circuit Breaker with Auto-Retry
Output Current Limit set to 1.2A
